

Natural enterosorbent

A new generation natural enterosorbent, a polymer of vegetal origin, positioned as a product for urgent help in case of food poisoning and intestinal infection.

It is recommended to always have it at home or in the car as well as during trips and holidays. It is good against:

- different kinds of poisonings (food, alcohol, medicine,),
- infections of alimentary tract (dysentery, salmonellas, infections of obscure aetiology),

By its absorption capacity
it far exceeds the efficacy of activated charcoal

- it is non-toxic, easily and completely taken out of alimentary tract,
- it binds, holds and takes out of a human organism different kinds of micro organisms and toxins produced by them, as well as biologically active substances that can accumulate in a human organism: cholesterol, bilirubin, lipids, bile acids, urea, histamine and others
- it causes no damage to mucous membranes of the gastrointestinal tract
- it has a positive effect on intestinal peristalsis,
- it compensates for deficiency of natural food fibres, has a positive effect on micro flora of the large intestine and on non-specific immunity,
- it has no contra-indications,
- it is compatible with any other treatment.

Available in a tamper proof, screw cap polyethylene container

Contains 50 tablets, each of 0.45g

Container is in a printed box with consumer leaflet

Available for private label

Shelf life of 2 years
