

A new generation natural enterosorbent, with lactulose for the treatment of dysbacteriosis.

Dysbacteriosis is a disease, a condition of a malfunction of the human organism, characterized by a whole set of symptoms: abdominal pain, rumbling, abdominal swelling, stool disturbances, abnormal condition of skin coverlets.

Contains a unique mix of lignin and lactulose

- binds and takes out of the human organism pathogenic micro-organisms and products of their activity
- suppresses growth of putrescent and pathogenic microflora
- normalizes intestinal microbe flora
- facilitates normalization of protein, fats and carbohydrate metabolism, proper assimilation of vitamins, micro-elements and macro-elements
- facilitates the reduction of histamines
- prevents uptake of toxic substances in the intestines
- eliminates clinical manifestations of dysbacteriosis (abdominal pain, rumbling, wind)
